Be Well Dinner Phase Two

In essence, the Ketogenic Diet causes the body to release ketones into the bloodstream. Most cells favour using blood sugar, coming from carbohydrates, as the body's primary source of energy. In the absence of circulating blood sugar from food, our body starts breaking down stored fat into molecules called ketone bodies. Once the body reaches ketosis, most cells will use ketone bodies to generate energy until we consume carbohydrates again.

When done correctly, a keto diet can have surprising health benefits, and thanks to our Culinary talents, you can be satisfied with the low carb diet.
